EXECUTIVE STRATEGIC BRIEFING · REVENUE & INTAKE TRANSFORMATION

Store managers belong on the glass, not answering price-check phones.

When technician bays handle customer intake, 50%+ of rush-hour calls abandon, cash quotes lose to comprehensive insurance deductibles, and hurried part lookups result in dry runs.

COMPARATIVE MODEL

In-House Floor vs. Telat Centralized Engine

Conventional Shop Floor Model

THE REVENUE LEAK

01 Unanswered Weekend & Surge Rings

Phones ring unpicked while staff is busy in repair bays or closed Sundays, bouncing warm customer leads directly to regional competitors.

02 Passive Cash Quoting & Deductible Hesitation

Reps quote full out-of-pocket cash prices ($350–$500) like automated machines instead of proactively qualifying $100 comprehensive insurance deductibles.

03 Wasted Mobile Truck Rolls & Missing ADAS

Hurried 10-second VIN lookups miss rain sensors, HUD brackets, and camera recalibrations, triggering a 12.0% dispatch cancellation and rescheduling rate.

Typical Intake Conversion: **33.9% Baseline**

Telat Centralized Intake Engine

AUDITED A/B RESULTS

SALES YIELD OUTPERFORMANCE

+30.2%

Higher Closed Work Orders

Vs. domestic U.S. in-house team on identical queues.

CONVERSION ACCELERATION

68.3%

Peak Quote-to-Work-Order

Lifted sustained conversion from 33.9% to 57.5%.

MOBILE ROUTE INTEGRITY

99.6%

NAGS & ADAS Accuracy

Job delay cancellations cut from 12.0% to 1.5%.

QUEUE GOVERNANCE

>50%

Abandonment Reduction

Stabilized peak lost calls consistently below 3.5%.

Integration Compatibility: **Omega EDI, CCC ONE, GlasPacLX**

Audited 3rd Place National CX Excellence Award (2025 · IMT / CX Global): Centralized intake transformation for a 200+ location multi-state U.S. auto glass chain.

4 Operating Hubs (2 CDMX, Juárez, El Paso TX) · +650 Specialists · 24/7/365

OPERATIONAL MECHANICS · TURNKEY FRONT-COUNTER DE-BOTTLENECKING

How the intake engine converts calls without shop friction.

Seamless four-stage booking protocol engineered to offload shop counters, protect technician installation schedules, eliminate dry runs, and capture high-margin ADAS recalibrations.

DEPLOYMENT PROTOCOL
Turnkey VDI / VPN Intake Pods

STAGE 01 — <15S ANSWER

Inbound Queue Capture

Calls bypass noisy shop desks entirely. Dedicated bilingual pods absorb morning insurance FNOL surges and weekend retail traffic, cutting abandonment below 3.5%.

Result: Zero lost leads.

STAGE 02 — 99.6% ACCURACY

VIN & ADAS Precision

Instant 17-digit VIN decoding identifies rain sensors, HUD glass, and forward camera brackets. Bundles static/dynamic recalibration immediately ($350–$600 margin secured).

Result: Zero dry runs.

STAGE 03 — 68.3% PEAK CONV.

Deductible Resolution

Trained specialists resolve deductible hesitations, compare out-of-pocket cash against comprehensive insurance coverage, and execute 3-way TPA claim conferences (Safelite / LYNX).

Result: Higher yield closing.

STAGE 04 — 96.8% IN-WINDOW

Clean POS Dispatch

Direct scheduling into repair bays or mobile routes with verified inventory, pushing confirmed work orders into your POS under audited PCI-DSS v4.0 tokenization.

Result: Clean shop schedules.

30-DAY HEAD-TO-HEAD PILOT

ZERO RISK VALIDATION

Carve out a dedicated slice of queue: weekend overflow, evening traffic, or a specific geographic market. We integrate via VDI / VPN into your POS within **14 to 30 days**. If our Quote-to-Work-Order conversion does not beat your internal benchmark, walk away with zero penalty.
